[linkedin.com/in/ihamzasadig/](https://www.linkedin.com/in/ihamzasadig/)

Data-driven professional with experience across Product Management, Software Engineering, AI, and Operations. Proven ability to analyze complex business problems, translate requirements into practical technology solutions, collaborate across stakeholders, and deliver digital initiatives from strategy and process design through implementation and launch.

Work Experience

Co-Founder & Consultant	Fooreo Technologies Manama, Bahrain	2026–Present
- Lead the digitization of a prescription-driven supply and delivery workflow with Salmaniya Medical Complex, designed to support 6,500+ monthly deliveries across inventory, patient orders, routing, and delivery tracking. - Manage multiple software projects concurrently across web, mobile, AI, and internal systems, taking products from client brief to launch. - Own end-to-end delivery across product planning, UX, technical architecture, development, testing, and deployment across web, mobile, AI, and internal systems. - Work directly with clients to define requirements, prioritize features, and translate operational problems into practical software solutions.		
Founder & Product Lead Product & Operations	fooreo.com Manama, Bahrain	2025–2026
- Took Fooreo from concept to live product, building a meal-subscription marketplace used by paying customers and restaurant partners. Owned product end-to-end across strategy, discovery, PRDs, UX, analytics, QA, and releases while coordinating closely with frontend and backend engineering. - Worked directly with restaurant owners, kitchen teams, and operators to understand capacity, meal preparation, delivery, and subscription workflows, turning operational constraints into product decisions. - Built customer and restaurant workflows across plan discovery, comparison, customization, swaps, pauses, renewals, delivery management, subscriptions, availability, meal changes, and reporting. - Designed calorie and nutrition tracking into the meal-plan experience, helping customers manage plans around dietary goals while structuring restaurant meal data.		
Software Developer Flutter & Appian	The Family Office Seef, Bahrain	2023–2024
- Worked directly on the migration of The Family Office app from native development to Flutter, supporting a platform managing approximately \$2B in assets. - Led development of an internal conversational AI and note-taking product, working across transcription data, model training, testing, and product iteration. - Designed and implemented Appian solutions, including process models and Web APIs, for seamless integration with external systems.		

Projects

Retail Analytics & Optimization	Galleria Concept	2026
AI/ML		
- Analyzed two years of multi-brand retail data to identify opportunities across vendor performance, pricing, merchandising, and operations, supporting more data-driven commercial decisions. - Built an OCR-based receipt intelligence pipeline to extract, clean, validate, and structure two years of historical transactions into a searchable dataset. - Applied EDA, feature engineering, RFM analysis, and customer segmentation to identify purchasing patterns, customer groups, and brand performance. - Developed KPIs and a Streamlit intelligence dashboard comparing sales, customers, repeat behavior, and vendor performance to support data-driven decisions.		

Education

Data Science Bootcamp, General Assembly, Bahrain	2026
- Completed an intensive bootcamp covering Python, data analysis, machine learning, data visualization, model evaluation, and applied data science projects.	
B.Sc. Software Engineering, Arab Open University, Bahrain.	2018–2023
- Member of the Student Council at AOU. - Represented AOU in the BSPCA soccer league. - Runner-up at Game Jam 2019, representing Arab Open University.
